Estadísticas por combinación (graph + dataset + missing_ratio)

Se ha calculado la media de MAE por método para cada combinación (graph, dataset, missing_ratio), seleccionando el *mejor* (menor MAE) y el segundo mejor para comparar. Para cada combinación se incluye:

- `best_method`, `best_mean_mae`, `best_n`, `ci_lower`, `ci_upper`

Resumen global

- `second_method`, `second_mean_mae`, `second_n`
- `delta_mean` (segundo - mejor)
- `p_raw`, `p_adj` (p-valor de Mann–Whitney y p ajustado por Holm), `significant`
- `rank_biserial` (efecto, rango-biserial)

Resumen rápido:

- Combinaciones evaluadas: 315
- Combinaciones con mejora significativa (p_adj < 0.05): 129
- Top métodos reportados como "mejor": `trss` (107), `tv` (54), `heat_diffusion_temporal` (34), `directed_tv` (31), `mean` (28)

Archivos con resultados completos:

- Tabla completa (CSV): Thesis-Copilot-Toolkit/results/analysis/batches/best_method_by_combo_stats.csv
- Tabla resumen (mejor por combinación): Thesis-Copilot-Toolkit/results/analysis/batches/best_method_by_combo.csv
- Libro Excel con todas las hojas (descargable): Thesis-Copilot-Toolkit/results/analysis/batches/summary_report.xlsx
- Dashboard interactivo (index): Thesis-Copilot-Toolkit/results/analysis/batches/interactive/index.html

Notas:

- Los IC95 se calcularon por bootstrap sobre la media del MAE (2000 repeticiones cuando hay suficiente muestra).
- La prueba usada para comparar mejor vs segundo fue Mann–Whitney U (no paramétrica). Los p-valores se ajustaron con Holm.
- Para combinaciones con muestras pequeñas (n < 3) no se reportaron p-valores.

Si quieres, puedo:

- Exportar únicamente las 129 combinaciones significativas a un XLSX separado.
- Añadir una figura (heatmap) que muestre solo combinaciones significativas por `best_method`.
- Subir `summary_report.xlsx` a un servicio (Google Drive, transfer.sh, etc.) y devolver un enlace

Resumen global

descargable.

Resumen legible: mejores métodos

```
Input file: best_method_by_combo_stats.csv
Total combinations: 315
Significant combinations: 129
