Distribución de MAE (N=60 escenarios) - Boxplot

Método de Interpolación

A box plot showing the distribution of Mean Absolute Error (MAE) for 40 different models. The x-axis is labeled 'Mean Absolute Error (MAE)' and ranges from 0 to 14. The y-axis lists 40 model names, which are truncated in the image. The models are ordered by their median MAE, with the lowest median MAE at the top and the highest at the bottom. The box plots are colored in a gradient from dark purple at the top to yellow at the bottom. Outliers are represented by open circles. The top 30 models have very low MAE, mostly below 2. The bottom 10 models have higher MAE, ranging from approximately 2 to 14.
